

The background is a dark olive green with a subtle diagonal gradient. Scattered around the central text are several stylized, floating icons of money: green banknotes and gold coins. The icons are positioned in the corners and along the top and bottom edges, creating a frame-like effect. The banknotes are oriented diagonally, and the coins are shown in various orientations, some appearing to be in motion.

The background is a dark olive green with a diagonal split. Various floating icons of money, including gold coins and green banknotes, are scattered across the scene. The number '01' is prominently displayed in the upper center in a bold, yellow font, with a thin yellow horizontal line underneath it.

01

Current Events

MAYBE YOU NEED TWO COLUMNS

Middle East War Escalation

The **US and Israel** are **currently in conflict with Iran**, with missile strikes and air attacks continuing across the region.

Iran has installed **Mojtaba Khamenei as the new Supreme Leader** after the death of Ayatollah Ali Khamenei.

The conflict has spread regionally:

- Missile and drone attacks across Gulf states
- Fighting between Israel and Hezbollah in Lebanon

Oil prices surged above \$100 per barrel due to fears the **Strait of Hormuz** (a key oil route) could be disrupted.

Risk of Global Oil Shock

- Energy giant **Saudi Aramco** warned that closing the **Strait of Hormuz** could cause “catastrophic consequences” for global oil markets.
- Around **20% of the world’s oil** passes through that route.

Market reaction:

- Oil prices ↑
- Shipping insurance ↑
- Airline costs ↑

MAYBE YOU NEED TWO COLUMNS

Global Markets Volatile

War risk and AI industry disruption are currently affecting global markets.

Tech stocks and European markets have dropped recently as investors react to geopolitical tensions and uncertainty around AI regulation, exports, and competition in the technology sector.

At the same time, investors are shifting toward safer assets. Gold prices and mining stocks have been rising as people move money into traditional safe-haven investments.

This reflects a typical **crisis market pattern**, where:

Gold prices rise,
Energy stocks increase,
Defence companies gain interest,
and technology stocks become more volatile.

Risk of Global Oil Shock

At global telecom and tech events like **Mobile World Congress 2026**, companies are racing to integrate AI across infrastructure and mobile networks.

Major themes:

- AI chips demand exploding
- Telecom companies building AI networks
- Governments considering new AI regulations

The background is a dark olive green with a diagonal split. Various floating icons of money, including gold coins and green banknotes, are scattered across the scene. The number '02' is prominently displayed in the upper center.

02

Sectors I Chose

AI & semiconductor

AI growth drives huge data-center spending.

AI memory / RAM companies

AI servers use far more memory than normal PCs.

Nuclear Energy

Demand rising as countries seek energy security amid war.

Oil Companies / Energy

Powers the world; prices up due
to Middle East conflict

Gold & precious metals

Safe during crises

The background is a dark olive green with a diagonal split. Various floating icons of money, including gold coins and green banknotes, are scattered across the scene. The number '03' is centered in a large, bold, yellow font with a thin yellow underline.

03

Stocks I Chose

🧠 **AI & Semiconductors** – benefit from the AI boom.

- NVIDIA
- AMD
- TSMC
- ASML

💾 **AI Memory / RAM** – AI needs lots of fast memory.

- Micron
- Samsung
- SK Hynix

☢️ **Uranium / Nuclear** – global demand rising.

- Cameco – big uranium producer
 - NexGen Energy – developing large projects
 - Denison Mines – exploration & development
- 

🏦 **Gold / Precious Metals** – hedge against inflation & crises.

- Newmont – largest gold miner
- Barrick – global gold producer
- Wheaton – low-risk royalty/streaming model

🛢️ **Energy / Oil** – fuels global growth.

- ExxonMobil – strong oil major
- Chevron – solid dividend & balance sheet
- Shell – global LNG leader

04

Reason

AI & Semiconductor Leaders

AI is causing **massive global demand for computing power and data centers**. Tech giants like Meta, Microsoft, Amazon and Google are spending **hundreds of billions on AI infrastructure**, pushing demand for semiconductors higher.

Data-center semiconductors could make up **50% of the chip market by 2030** because AI workloads need huge computing power.

Key Stocks

NVIDIA

- Dominates the **AI GPU market** used for training models like ChatGPT.
- Most AI data centers rely on NVIDIA chips.
- AI infrastructure spending is exploding globally.

Advanced Micro Devices

- Main competitor to NVIDIA with MI-series AI accelerators.
- Large cloud companies are adopting AMD chips to reduce dependence on NVIDIA.

Taiwan Semiconductor Manufacturing Company

- Manufactures chips for NVIDIA, AMD, Apple and others.
- Without TSMC, advanced AI chips cannot be produced.

ASML

- Makes EUV lithography machines used to produce advanced chips.
- It is the **only company in the world** making these machines.

★ Why this sector matters:

AI is driving a **global data-center building boom**, pushing semiconductor demand to record levels.

AI Memory / RAM

AI chips require **high-bandwidth memory (HBM)** to process massive datasets.

AI demand is already causing a **memory chip shortage**, and prices are rising.

Memory companies could generate **over \$550 billion from the AI boom**.

Key Stocks

Micron Technology

- Major US producer of DRAM and HBM memory.
- AI servers require huge amounts of Micron memory.

Samsung Electronics

- One of the largest memory manufacturers globally.
- Supplies DRAM and HBM used in AI servers.

SK Hynix

- Leading supplier of **HBM used in NVIDIA AI GPUs**.
- Currently one of the biggest beneficiaries of AI demand.

★ Why this sector matters:

AI servers use **far more RAM than normal computers**, making memory one of the fastest-growing chip markets.

☢ Uranium / Nuclear Energy

Countries are turning back to nuclear power because it is **reliable, low-carbon energy**.

At the same time, global conflicts and unstable oil supplies are increasing demand for **energy security**.

Key Stocks

Cameco

- One of the largest uranium producers in the world.
- Supplies uranium fuel for nuclear reactors.

NexGen Energy

- Developing the **Rook I project**, one of the biggest uranium deposits.

Denison Mines

- Uranium exploration and future production projects.

★ Why this sector matters:

- AI data centers require huge electricity.
- Nuclear power is being considered as a stable energy source.

🌐 Gold / Precious Metals

Gold is a **safe-haven asset during wars and financial crises**.

The current **US–Israel conflict with Iran** has pushed investors toward gold.

Gold prices rose as investors sought protection from market volatility caused by the conflict.

Key Stocks

Newmont Corporation

- Largest gold mining company globally.

Barrick Gold

- Major international gold producer.

Wheaton Precious Metals

- Streaming/royalty model (lower risk than mining).

★ Why this sector matters:

When **wars, inflation, or financial instability happen**, investors buy gold to protect wealth.

Energy / Oil

Energy prices are being heavily affected by **Middle East conflict and supply risks**.

- Oil prices have surged since the **US-Israel war with Iran began**.
- Attacks on oil infrastructure and shipping routes can disrupt global supply.
- War and geopolitical tensions often push oil prices higher.

Key Stocks

ExxonMobil

- One of the most profitable global oil majors.
- Benefits when oil prices rise.

Chevron

- Strong balance sheet and consistent dividends.

Shell plc

- Global leader in LNG and international energy trading.

★ Why this sector matters:

War, energy shortages, and global demand keep oil prices volatile.

05

Risks

AI & Semiconductor Risks

- **AI regulation:** Governments may regulate AI development and data usage.
- **China chip restrictions:** Export controls between the U.S. and China could disrupt semiconductor supply chains.
- **High valuations:** Many AI stocks are already priced for strong future growth.

Energy / Oil Risks

- **Oil price crashes:** Oil prices can fall if global demand slows or supply increases.
- **Geopolitical shifts:** If conflicts in the Middle East ease, oil prices could decline.
- **Energy transition:** Long-term shift toward renewable energy may reduce oil demand.

Gold Risks

- **Strong U.S. dollar:** A stronger dollar can push gold prices lower.
- **Higher interest rates:** When interest rates rise, investors may prefer bonds over gold.
- **Reduced crisis demand:** If geopolitical tensions decrease, demand for safe-haven assets may fall.

The background is a dark olive green with a diagonal split. Various floating icons of money, including gold coins and green banknotes, are scattered across the scene. The number '06' is prominently displayed in the upper center in a bold, yellow, sans-serif font, with a thin yellow horizontal line underneath it.

06

For Long Term

🧠 AI & Semiconductor Leaders

NVIDIA

Why investors like it

- Dominates AI GPUs used in data centers.
- Most AI companies use NVIDIA chips to train models.

Current event

- Tech companies are massively increasing AI spending, pushing demand for GPUs higher.

★ **Simple reason:** Leader of the AI boom.

Taiwan Semiconductor Manufacturing Company

Why investors like it

- Manufactures chips for NVIDIA, AMD, Apple, and many others.
- Controls about **70% of advanced chip manufacturing**.

Current event

- AI demand is driving huge growth in chip production capacity.

★ **Simple reason:** Most advanced chips in the world are made here.

ASML

Why investors like it

- Only company that produces **EUV lithography machines** needed for advanced chips.

★ **Simple reason:** Without ASML machines, advanced chips cannot be made.

Advanced Micro Devices

Why investors like it

- Biggest challenger to NVIDIA in AI chips.
- Growing partnerships with AI companies.

★ **Simple reason:** Major competitor in AI hardware.

Broadcom

Why investors like it

- Produces networking chips and custom AI chips used in large data centers.

★ **Simple reason:** AI data centers need its networking and custom chips.

AI Memory (Fastest Growing Part of AI)

Micron Technology

Why investors like it

- Major producer of **HBM memory** used in AI servers.

Current event

- AI demand is pushing memory companies into rapid growth.

★ **Simple reason:** AI computers need huge amounts of RAM.

SK Hynix

Why investors like it

- Leading supplier of **HBM memory** for NVIDIA GPUs.

★ **Simple reason:** Key supplier for AI chips.

Energy (War + Oil Markets)

ExxonMobil

Why investors like it

- One of the largest and most profitable oil companies.

Current event

- War in the Middle East has pushed oil prices higher due to supply fears.

★ **Simple reason:** Higher oil prices increase profits.

Chevron

Why investors like it

- Very strong balance sheet and stable dividends.

★ **Simple reason:** Stable energy company that benefits when oil prices rise.

Safe Haven (War & Inflation)

Newmont Corporation

Why investors like it

- Largest gold mining company in the world.

Current event

- The current Middle East war has increased demand for gold as a safe-haven asset.

★ **Simple reason:** Investors buy gold during crises.
